—

March 24, 2022:

The city of Toronto has issued a statement on their website regarding the fourth booster of mRNA vaccines to fight the spread of COVID-19. They have recommended the fourth dose to residents of long-term care homes, retirement homes, elder care lodges and any other adults who reside in congregate settings. They've also recommended that any adult over 18 years of age, who are immunocompromised should receive this next dose, which would be administered at least 3 months after their third booster was received.

Adults 18 years of age or older who are not immunocompromised, but have received 3 doses of any non-Health Canada authorized COVID-19 vaccine, as long as they show proof of immunization and have received their first 3 doses at the appropriate interval will be eligible.

They have indicated that both the Pfizer or Moderna vaccines would be appropriate and available for the fourth boosters. However, they have specified that data suggests that Moderna may provide better immunity.

Those who may be extremely immunocompromised are required to bring a [referral form](#) with them, or a letter from their physician or their authorizing organization, confirming that they are eligible. The letter would require their full name, address (matching an ID) and your OHIP number.

The final eligibility at this time would be those who are taking eligible medications. To see a list of what medications are considered under this, please see the list here under [Table 1](#). You would be required to bring proof of the prescription rather than bringing the prescription itself, due to some requiring special handling. If you do not have a prescription record, it's recommended that you call your pharmacy to request one. If you must bring the physical medication with you, they are asking that you place it in a see-through plastic bag as to be able to read the full medication name, prescription date and the individuals name on the label, and to ensure that the bag is well sealed.

UPDATE April 7, 2022:

As of today (April 7, 2022), eligibility for fourth boosters of mRNA vaccines for COVID-19 has been expanded. The Ontario government has announced that the eligibility for these vaccines has now been opened up to individuals aged 60 and over, as well as First Nation, Inuit and Métis individuals and their non-indigenous household members aged 18 and over.
